*ddgi* design document manage

## *d*esign

The initial phase where ideas are developed with respect to the Owners needs, budget and schedule. During this phase, the project takes “shape” as we layout the spaces of the building and exterior elevations to meet the Owners needs, the building code and land use requirement. The mechanical and electrical systems are also defined.

## *d*ocument

This phase involves the completion of construction documents (plans, specifications and contract documents) that enables bidding and construction to proceed without confusion or delay. The core to any successful project is the documentation. From the design to the bidding and construction phase, clear and accurate documents ensure precise construction pricing and are crucial to maintaining timelines.

## *M*anage

This phase includes contractor bidding and construction. DDGi will solicit for contractor pricing (bidding) based on the construction documents. In this phase, DDGi will answer pre-bid questions, perform contractor qualification, prepare Owner /Contractor contracts, perform site observations as the owner representative to ensure the quality of the materials and construction, conduct job coordination meetings reviews shop drawing and product submittals and prepares a “punch list” at the completion.
